

Greenerway AS is a Norwegian company specializing in renewable energy solutions, particularly focusing on charging infrastructure for heavy transport and battery storage systems to enhance the utilization of renewable energy. Their offerings include fast-charging solutions tailored for electric trucks, scalable to meet the growing needs of businesses. Additionally, they provide battery systems that increase power availability, reduce grid rental costs by mitigating peak loads, and offer energy management systems for real-time monitoring and optimization of energy consumption. Greenerway offers tailored solutions that include battery technology, solar panel systems, and advanced control systems to maximize benefits for their customers.

Established in 2023 and headquartered at Rosenborgveien 6, 1630 Gamle Fredrikstad, Norway, Greenerway is led by CEO and founder Knut Gustavsen. The company has a team of approximately 14 employees. In January 2025, Greenerway merged with Delta-p and Haakon Larsen to form Shift Energy Holding, an industrial platform aimed at further growth in the energy sector.

Greenerway is dedicated to delivering customized, innovative, and sustainable energy solutions to industrial and commercial clients. Their product portfolio encompasses battery technology, fast charging, and advanced control systems. Greenerway is committed to enabling more profitable renewable energy adoption by offering turnkey solutions and software for battery energy storage and solar energy production. The company emphasizes continuous improvement and optimization of their systems and services to contribute to a more sustainable future.

In collaboration with Smart Innovation Norway, Greenerway is developing an AI-based energy management system (EMS) designed to optimize battery investments by analyzing individual consumption patterns against electricity market conditions and tariffs.
